Who are we?

Company History

A history of service in the communications industry

Spirit Telecom was formed in 2002 to bring several modern communication services under one roof. By doing so, Spirit takes advantage of more than 20 years experience in the Internet and data communications fields and combines those services with a robust offering of local and long-distance voice services.

Our roots in the communications industry run deep. We are owned by the independent telephone companies and cooperatives of South Carolina, and their roots go all the way back to 1896 - that's when the oldest of our owner companies was founded. They share a long track record of helping customers with their communications needs. And they share a commitment to progress. They pioneered the use of touch-tone dialing, direct-dialed long-distance and other innovations throughout the last century.

At the heart of our communications network is our retail and wholesale local, long-distance, data, Internet and database services.

Spirit Telecom began serving South Carolinians with long-distance, paging and private line services in 1993. Initially serving the independent telephone and cooperatives of South Carolina, Spirit has expanded its retail operation into North Carolina, Georgia and Florida with the capability to provide wholesale services nationwide.

In 1994, we began offering wholesale Internet services to the independent telephone and cooperatives of the Palmetto State. The service has expanded to a nationwide wholesale provider of Internet, Technical Support, Web Hosting, Domain Registration and Portal Development.

Spirit Telecom Broadband & Networks opened in 1996 offering one of the first Asynchronous Transfer Mode networks in South Carolina and Western North Carolina, providing customized data, voice, Internet and video networks for businesses and governments in the Southeast and Midwest.

Today, Spirit Telecom employs more than 250 experienced professionals to serve your communication needs.

The owners of SCTG Holdings, LLC (dba Spirit Telecom) are:

- Bluffton Telephone
- Chesnee Telephone
- Chester Telephone
- Comporium Group:
    - Fort Mill Telephone Company
    - Heath Springs Telephone Company
    - Lancaster Telephone Company
    - Rock Hill Telephone Company
- Farmers Telephone
- Hargray Telephone
- Home Telephone
- Horry Telephone
- Lockhart Telephone
- Palmetto Rural Telephone
- Pond Branch Telephone
- Piedmont Rural Telephone
- Ridgeway Telephone
- Sandhill Telephone
- West Carolina Rural Telephone

Spirit Telecom

Are you looking for a VoIP solution for your business?

September 15, 2005

Independent Telephone

Spirit Telecom's partnership with independent telephone companies is deeply rooted in our owners, independent telephone companies and cooperatives themselves.

We understand the demands of operating a rural ILEC and have developed programs to mitigate costs and staffing for your Internet or SS7/AIN services.

We were a pioneer in offering Internet services to independent telephone companies, and just like the Internet, we have changed over the years to meet the demands of a highly competitive marketplace. We partner to offer a fully-hosted solution under your brand, or an on-site solution that we manage for you. All of our services are backed by technical support, 24 hours a day under terms that meet your needs.

Our competitive SS7/AIN service provides a reasonably priced option for the telephone side of your business and offers an alternative for companies seeking a different provider. Our service allows you to keep pace with the rapid change in the telecom market while providing reduced call set-up times and AIN functionality and features.

For your money, we offer the best balance of features on the market today. More importantly, we will tomorrow, too.

Independent Telephone

Telecom VoIP Program

What is Voice over Internet Protocol?

Voice over Internet Protocol (VoIP) is a different way to make and receive telephone calls while offering extended services at reduced pricing. With traditional phone technology, a direct circuit is opened between two calls. That's why the system is often referred to as "circuit-switched." VoIP treats voice like data, breaking a conversation into tiny packets of data and shipping them over a network like the Internet. Because VoIP calls are converted to data, they can be transmitted over any data network, but they do require a high-speed, or broadband connection to the home or office to work. These connections can be DSL, Satellite or Cable Modem.

What VoIP offerings are available to independent telephone companies?

Spirit offers two products for independent telephone companies that allow them to provide a turn-key product in their market place. Spirit's service helps minimize up-front capital costs for switches and application servers and reduce operating costs for technical staff with skills needed to serve the IP market and the Public Switched Telephone Network (PSTN.) It also reduces time to market with a VOIP product that is already in place and delivering services to customers.

- Value-Added Services
- SS7 & AIN Services
- Telecom VoIP Program
- VoIP Training

Spirit provides two options for the independent telecom market, a fully-hosted service or a hybrid service.

Fully-hosted: In most cases, Spirit Telecom can provide telephone numbers that are a local call for your customers. This service is an excellent choice for independent telephone companies seeking to "edge out" into a competitive RBOC territory, expand their customer base, gain additional revenue or offset losses.

With a fully-hosted solution, you have minimum capital investment but you can extend your TDM infrastructure and still offer VoIP, efficiently route PSTN call to IP calls, control your customer base and provide the service under your brand. Spirit Telecom can provide billing on your behalf or provide a standard CDR format for you to use with your current billing platform. Long-distance service is available through Spirit at very aggressive rates.

Hybrid: This solution is ideal for the independent telephone companies seeking to "keep out" competitors such as cable companies or ISPs offering a voice service. This is a perfect choice for the independent telephone company to offer a service to compete with national brands without having to write a big check up front.

With a hybrid solution, the independent can offer a feature-rich voice service on top of their current broadband offering. They maintain complete control of their customer base, while offering their own local VoIP service. Spirit Telecom can provide billing on your behalf or provide a standard CDR format for you to use with your current billing platform. Long-distance service is available through Spirit at very aggressive rates.

With either solution, your company gets:

- Every call signal monitored and measured
- Quality of service elements benchmarked
- First Level Technical Support
- Second Level Network Operations
- Third Level Network/Voice/IP Engineering

VoIP Training

Independent Telephone

VoIP Training

Note: Class Schedule Change, Please see below.

Independent telephone companies are faced with one of the greatest challenges in their history, as Voice Over IP rapidly becomes an increasingly popular offering from cable companies and national providers.

Don't let the competition get you down and don't let your staff get left behind in the rush.

Take advantage of Spirit Telecom's VoIP training to equip your staff with the necessary tools to provision, implement, troubleshoot and support the technology and protocols needed to provide the service in your market.

Spirit has developed a series of programs to provide VoIP training that is relevant,

effective and cost effective to the telecom industry. The hands-on training will provide your employees with the skills they need to survive in the VoIP world of today.

Training programs take from one to five days and are held are held at our corporate office in Columbia, S.C.

Sign up today for the following classes:

- **VoIP Lite:** A one-day class to provide an understanding of IP networking, VoIP concepts and vocabulary. This class is ideal for your employees who will not be directly involved in establishing or supporting the service.

  Classes to be held: *June 30, July 28 and August 18.*

- **VoIP Hands-On:** A three-day class devoted to developing knowledge of the protocols, QOS essentials and security issues. This is a hands-on lab using Cisco networking, call manager and SIP Proxy. This class is ideal for customer service and other staff such as sales and marketing.

  Classes to be held: *June 27-29, July 25-27 and August 15-17.*

- **VoIP Boot Camp:** A very intensive five-day course of study that provides comprehensive coverage of VoIP architecture protocols including SIP, MGCP and RTP. This course features more than 50 lab exercises and includes an exam with a final review. The Boot Camp is intended for front-line engineers and technicians who will implement the service.

  Classes to be held: *June 20 - 24, July 18-22 and August 15-17*

How to enroll:

By e-mail to: training@spirittelecom.com
By fax to: 803-802-4714

By Phone: Barbara Dunavant - **803-802-6401** or **888-842-2900 ext. 6401**

SpiritPhone Service

Are you looking for a VoIP solution for your business?

Business and Industry

SpiritPhone
A New Way To Communicate

SpiritPhone is a modern solution to making telephone calls using Spirit Telecom's private, secure data network over a broadband connection. Calls made using SpiritPhone do not travel over the public Internet. The SpiritPhone service is transmitted over a managed Internet Protocol network that has been engineered using Multiprotocol Label Switching (MPLS), which gives voice traffic priority and ensures quality of service.

SpiritPhone service is based on Voice over Internet Protocol (VoIP), a method by which voice is digitized and transmitted in packets rather than using a circuit on the public switched telephone network (PSTN). Advanced IP telephony includes many enhanced features, such as voice mail, conferencing, presentation viewing, and unified messaging for cell and PDA devices. These service applications reside on hosted-network servers, which deliver almost instantaneous responses provide all the features of the SpiritPhone service.

How does this type of solution differ from other Internet-based call management solutions on the market?

SpiritPhone Service is hosted in a carrier-grade network, not the Internet. The applications are browser-based and easy for the customers to administer, manage, and update features such as speed dialing, click-to-call, and moves, adds, and changes. Using this solution, a PBX is not required - only phones. Other Web-based

portals, such as those offered by Vonage, are simply PC-based solutions with a Web-enabled front-end for making calls over the Internet. Calls over the Internet may be satisfactory for consumer-grade calling, but businesses require a higher quality of service. SpiritPhone Service gives the user the same voice quality they have been accustomed to with their own PBX.

What types of service are offered?

SpiritPhone offers an Enhanced Local Service that is feature rich and easy to maintain. It provides extensive calling features at no extra cost and includes free LATA-wide calling and 200 minutes of free long-distance calling per line. With SpiritPhone's "Get Up And Go" functionality, you can use your IP telephone wherever you have a broadband connection. In network calling using your SpiritPhone is free. With the Enhanced Local Service, you have access to a web portal to administer the features you want to use and view logs of calls you have made.

SpiritPhone also offers a low-cost, fully-hosted voice business solution to replace costly PBX, Key systems or Centrex services that can significantly reduce communication costs, while offering a much more feature rich service that is easy to manage. The service provides expanded features such as voice mail, conferencing, and the Personal Locator (find me/follow me). Additional features include call center functionality, client-billing codes, and remote system access. SpiritPhone also features a suite of browser-based capabilities for controlling personal communications, including Personal Locator controls, Microsoft Outlook® integration with click-to-call functionality, call logs and integrated messaging.

What service components are associated with SpiritPhone service?

SpiritPhone provides a complete spectrum of local and long-distance functionality. Specific service components depend on the SpiritPhone package selected.

How will I know which service to select?

Your SpiritTelecom sales representative and a technical consultant will help you determine your needs and provide you with the appropriate solution.

Who could use the SpiritPhone service?

Any small, medium or large business is a potential SpiritPhone customer. Financial services, legal services, travel agencies, real estate offices, government, and higher-education organizations can benefit from using SpiritPhone.

What benefits come with the fully-hosted SpiritPhone service?

This service allows small and medium businesses and multi-site enterprises to control expenses and management associated with PBXs and IP/PBXs by migrating to a fully-hosted solution using Spirit Telecom's redundant feature servers. SpiritPhone has all the features and functions of a very robust IP-PBX system, yet it has better user interfaces and more features than most IP-PBXs and Key systems on the market today. This hosted IP-Centrex offering reduces capital expenditures and provides additional savings through browser-based *Moves*, *Adds* and *Changes* and on-net calling between offices. The features and applications are not only delivered to a customer's phone via a single dedicated Internet access pipe to the business, but the service can be individually customized by the user through the web-based call manager.

What are the benefits of using SpiritPhone Service?

SpiritPhone can provide the following benefits:

- Shared company directory
- Prioritized call handling
- User-friendly conferencing service
- A unified voice mailbox
- Instant tie-in to remote workers and branches
- A web-based Call Manager for all feature management and personal preferences
- Free "on-net" calling - Eliminates long-distance between offices
- Built-in disaster recovery
- Minimized service calls

- Minimized system upgrade costs
- Minimized upgrade costs for new features
- No full-time employee needed to manage phone system
- Scales quickly to meet staffing changes
- Adjust easily to each user through a web browser
- Deliver predictable monthly costs
- Adapt rapidly to integrate additional personnel
- Work from office, home, mobile phone or while visiting a customer

The following features are available at no extra charge and depend on the bundle of service selected:

- Dial Tone/Connectivity
- Extension Dialing
- Anonymous Call Rejection
- Call Forward Always
- Call Forward Busy
- Call Forward No Answer
- Call Forward Remote Access
- Call Hold
- Call Return
- Call Trace
- Call Transfer
- Call Waiting
- Cancel Call Waiting Per Call
- Calling Line ID Delivery
- Calling Name Delivery
- Calling Line ID Blocking Per Call
- Consultation Hold
- Do Not Disturb
- Last Number Redial
- Speed Dial 8 and Speed Dial 100
- Three Way Calling

CommPilot Call Manager:

Click-to-dial, Redial, Hold, Transfer, 3-Way Phone Lists (Personal, Group, Call Logs)
LDAP Directory Integration, Outlook Integration, Printable Group Directory

CommPilot Personal Web Portal:

- Alternate Numbers
- Call Forwarding Ring Splash
- Call Forwarding Selective
- Call Screening by Digit Patterns
- Calling Line ID Blocking
- Calling Line ID Delivery by Call
- Cancel Call Waiting
- CommPilot Express
- Distinctive Alert Ringing
- Priority Alert Ringing
- Remote Office
- Selective Call Acceptance
- Selective Call Rejection
- Shared Call Appearance
- Simultaneous Ring - Personal

Group Services:

- CommPilot Group Web Portal
- Moves, Adds and Changes
- Account Codes
- Authorization Codes
- Call Capacity Management
- Call Interecept
- Call Park
- Call Pick Up

- Calling Group ID Delivery
- Calling Line ID Delivery
- Calling Line ID Confirmation
- Calling Plans (Incoming/Outgoing)
- Enhanced Outgoing Calling Plan
- Configurable Extension Dialing
- Configurable Feature Codes
- Device Inventory
- Group Resource Inventory Report
- Hunt Groups
- Loudspeaker Paging
- Music on Hold
- Series Completion
- Voice Portal

Messaging:

- Voice Mailbox
- Message Management
- Voice Messaging Call Back
- Voice Message Waiting Indication
- Voice Message Notification*
- Voce Messaging to e-mail*
- Call Notify*
- * Requires CP Personal web portal

What is the difference between voice mail and Unified Messaging?

There are two options for messaging: 1) standard voice mail solution is hosted and accessed as most systems work today, and 2) Unified Messaging allows you to access and send messages by e-mail, voice mail or to listen to voice messages on your PC.

Is conferencing provided?

Yes, conferencing is available and offers the end-user an on-demand conference service and the ability to schedule conference calls via the web.

Who manages this service?

Once the service is ordered, the technical and/or office contact designated by the customer will be provided information on setting up the service. The contact will access a company portal that allows them to manage their phone service without having to manage equipment. Because the web-based management also is hosted with SpiritPhone, the administrator can manage a remote office, or work on changes from home or anywhere he or she has access to an Internet connection.

What happens to the voice quality when several users are using their phones, and several other users try to do large data transfers?

When we evaluate your needs, we will determine what bandwidth will be required for the number of employees. The system will be provisioned and installed to ensure voice quality, and the number of users and/or data being transmitted won't have an effect on voice quality.

What phones are supported? Is any additional equipment necessary to attach those phones to the service?

Depending on the service you buy, it can work with any analog phone that is connected to an Integrated Access Device (IAD). Fully functional IP phones from Cisco, Polycom and others are available for a more robust solution.

What about security? Could someone "hack into" my network?

The hosted communications servers are fully secured and are hosted in a facility that has redundant power, battery back up and fire suppression.

What if I have a firewall? How would it work?

SpiritPhone has multiple solutions for delivering IP telephony while maintaining the integrity of the firewall. The solution operates outside of the firewall and can utilize a Network Address Translation device (NAT) that only allows voice calls to the specific IP addresses through the firewall.

What kinds of reports are available to the end user to manage this service?

Through your SpiritPhone web portal you have full access to the services assigned each user and can create reports about usage. Every time a change is made to an account, the report is automatically updated and can be viewed from any Internet connection.

Who do I call for service issues?

SpiritPhone provides Tier 1 support that should resolve 90 percent of all support issues. Your sales representative or customer service representative can assist with other issues.

What about 800 Service?

Customers will be able to keep this as they do today. It will be treated as another DID number on the hosted service.

What about customers who need call accounting codes and billing codes?

The service has the ability for your customer to assign as many codes as they like, based on users, projects, and clients, for example. At the end of the billing cycle, these calls can be separated out by account/billing code, so your customer knows where these calls are to be charged.

Internet Services

Wholesale ISP Program

Want to provide Internet & web services in your area? Don't go it alone. We can enable you to become an ISP or improve on your existing Internet services through our comprehensive Licensee Program.

VISP Program

If you are not ready or desire to become a facilities-based ISP -- to invest the capital, build the backbone, maintain a network, employ the staff, battle the hackers, spammers and competition -- our VISP Program is the solution for you.

Products & Services

Internet Equipment - Need equipment? We offer competitive pricing on several brands of equipment needed to provide dial-up to high-speed Internet connections.

Online Training - E-Clasroom, our web-based training service allows customer to take courses online ranging from business and computer skills to programming and electronic engineering.

E-mail Services - We can provide multiple E-mail addresses for any and all Domain Names you control. You can forward aliases to your E-mail address or configure your account to reply automatically. For DSL and Dial-up Internet services, we include 8 E-mail addresses per account as well as Spam & Virus blocking through our relationship with an industry leader, Postini Mail services.

Retail Dial-Up & DSL - We offer various affordable plans for Dial-up & DSL Internet service in the following locations in South Carolina: Columbia, Greenville/Spartanburg, Charleston, Florence. Also available in the following locations outside South Carolina: Charlotte, NC, Augusta, GA, Savannah, GA

Each plan includes: 8 e-mail addresses, Web-based E-mail Access, 20 MB Personal Web Space, 24/7 Technical Support, Spam & Virus Blocking.

Web Hosting - Our Web Services department provides numerous hosting plans, along with the option of including FrontPage extensions on any site.

Domain Name Registration & Services - One of the most powerful innovations of the World Wide Web is that anyone can launch and maintain web sites that are accessible to the entire world.

Content Filtering - We offer a comprehensive service for filtering out adult content, hate speech and other undesirable web pages while surfing the web via a browser.

Spam & Virus Blocking - When you open an account with us, you will automatically have all your e-mail scanned for Spam (unsolicited commercial advertising) and viruses that may be attached to messages. Through our partnership with Postini, an industry leader in e-mail blocking services, you will have a log-in to get to your blocking Message Center and can delete or deliver any suspicious messages that get quarantined. You can also create lists of acceptable addresses to allow through to your in box.

Wholesale ISP Program

Want to provide Internet & web services in your area? Don't go it alone. Spirit Telecom can enable you to become an ISP or improve on your existing Internet services through our comprehensive Licensee Program.

Our program has helped more than 80 companies launch and support a full-range of Internet and Web services, and that has allowed them to increase customer loyalty and attract new customers. By partnering with us, you will have everything you need to become an ISP or even upgrade your existing service with a minimum of investment and complication.

Our Licensee Program

From design to planning to implementation & support, we are there from beginning to end. When you become a Licensee, you get 24/7 technical support for your staff and your customers, total engineering support and 24/7 network monitoring, a dedicated account manager as well as the abilities to offer Internet, e-mail, web and other vaulable add-on services easily.

With Spirit Internet, you get all the benefits of our national network without the expense, and all of our services are provided in the background so your service can be totally branded as your own. In addition, you are provided with access to a Licensee Intranet for task requests, technical resources and information, and every spring we host an annual client meeting to bring together all of our clients for a few days of information, fun and brainstorming

A Complete Solution

Our wholesale ISP program service allows customers all over the United States to service residents, businesses, government agencies and universities. Simply stated, Spirit Telecom has put together all of the ingredients required for you to provide Internet services.
